Existing Solutions and Their Limitations

1. LinkedIn Learning Career Hub

Features: AI-based learning plans, career goals, skill insights, and career development recommendations.

Limitations:

- Learning Plans are available through eligible organizational licenses, not as a universally available standalone feature.
- Learners cannot directly edit the generated Learning Plan content.
- Learning Plans currently do not have their own reporting feature.

Opportunity for LearnUP: Provide flexible learning plans that users can customize and track through measurable progress reports.

2. Eightfold AI

Features: Skill-gap analysis, career matching, skills intelligence, and personalized growth recommendations.

Limitations and challenges:

- Career recommendations depend on the quality and relevance of skills and career data.
- AI-based matching requires ongoing fairness checks because historical data can contain bias.
- Privacy and responsible use of personal career data require careful management.

Opportunity for LearnUP: Explain why each skill is recommended, show evidence behind readiness scores, and provide transparent feedback.

3. SkillGap AI

Features: Skill-gap identification and career-learning roadmaps.

Limitations: Its current capabilities and specific limitations require further verification through direct product testing and official documentation. Therefore, no unverified limitation should be presented as a confirmed fact.

Opportunity for LearnUP: Validate recommendations through practical tasks and show which skills need improvement first.

4. Coursera

Features: Online courses, professional certificates, and career-oriented learning.

Potential limitation to investigate: Completing a course does not automatically prove that a learner can apply the skill in a real-world project.

Opportunity for LearnUP: Combine course recommendations with hands-on projects, skill assessments, and practical performance tracking.

Website: https://www.coursera.org/

5. HackerRank

Features: Coding challenges, mock tests, AI-powered mock interviews, and role-based preparation.

Limitations and challenges:

- Its preparation tools are focused mainly on technical assessment and interview readiness.
- Some advanced preparation features have subscription limits or require paid plans.
- Coding performance alone may not represent every skill required for a complete job role.

Opportunity for LearnUP: Connect coding assessments with a broader learning roadmap, project evidence, and career-readiness tracking.

6. LeetCode

Features: Coding problems, algorithm practice, and technical interview preparation.

Potential limitation to investigate: Coding practice alone may not cover all job requirements, such as building complete applications, collaboration, and project implementation.

Opportunity for LearnUP: Recommend practical projects and other role-specific skills in addition to coding practice.

Website: https://leetcode.com/

7. Udemy

Features: Online courses covering programming, technology, and professional skills.

Potential limitation to investigate: Learners may need additional guidance to decide which courses to take, in what order, and how to verify their practical understanding.

Opportunity for LearnUP: Recommend courses according to skill dependencies, assessment results, and the learner’s target role.

Website: https://www.udemy.com/

8. AI-Based Career and Learning Research Projects

Features: Research prototypes explore skill-gap analysis, career recommendations, and personalized learning paths.

Potential limitations to investigate:

- Recommendations may depend on the availability and accuracy of training data.
- Predicted career trends may change as industry requirements evolve.
- Generated learning paths need practical validation to confirm their usefulness.

Opportunity for LearnUP: Regularly update skill requirements, explain AI recommendations, and measure progress through assessments and projects.
